

FUGRO GEODIN CONSULTATIONS

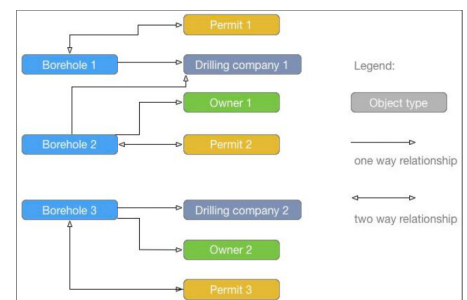

A GeODin consultation with our Fugro experts offers you the opportunity to optimise GeODin in your workflow. Let us help you based on our many years of experience offering advice in planning data collection, presentation options or GIS integration.

DATA ANALYSIS

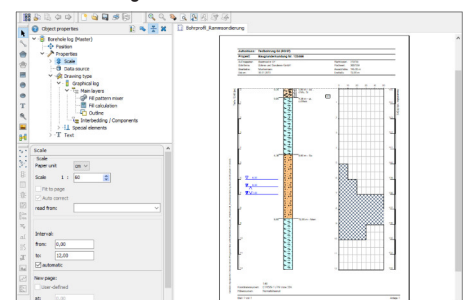

Often the task at hand can be described so: you have a large data collection spanning many years / decades, in differing formats, which is to be given a consistent structure and allow efficient and effective use. Complex information of this form requires careful and well planned preparation. Information must be initially categorised in analogue and digital form, duplication of records, incompatibilities and variations in digital data formats considered. Fugro can carry out a thorough analysis of your data and information in order to recommend the appropriate GeODin database structure and format.

In addition we can offer the service of collecting and processing your data to produce a GeODin database.

In many cases new GeODin objects and data collection masks must be created in order to have a sound structural base into which data is to be fed. Often older data formats must first be converted in order to meet new structural guidelines and security requirements. Additional presentation graphics might be required in order to get a better overview of the facts at hand.

Database design

Layout design

GEODIN 9 CONSULTATIONS: DAYS AND TOPICS		
DAYS	EXAMPLE TOPICS	GEODIN+ PRICE / PRICE
1 day	Layout creation & management, cross-sections	1400 / 1450 €
1,5 days	Importing and exporting data, complex graphics	1875 / 1950 €
2 days	GIS integration and map creation	2650 / 2750 €
3 days	Analogue and digital data categorisation, system queries	3800 / 3950 €
5 days	Geo-information systems, object and data type design	6200 / 6450 €

*Additional travelling expenses may be charged.
GeODin+ is a software update service.
All prices are net.*

CONTENT & PRICING

You determine what themes shall be included in the consultation – we can adjust the contents and number of days to best suite your individual wishes. Typical consultation topics include:

- GeODin project management
- Data collection concepts
- Document management
- Complex layout creation
- Designing GeODin maps
- Integration with QGIS & ArcGIS 10
- Working with queries
- Object type – choice and design
- Data types, list comparisons, formulae & plausibility

GeODin consultations are priced at the same rate as on-site training. There is no limit on the number of participants. Customers with Software Update Service contracts can save up to 250 €.

LOCATION

Usually consultations take place at the clients' establishment where the existing data management infrastructure can best be utilised and integrated in the consultation. We require a certain technical infrastructure (network and internet access, projection facilities).

Alternatively a consultation can be arranged at the offices of Fugro Germany Land in Berlin. This is particularly helpful where the advice of several GeODin experts is required to provide the best solution (programmers, GIS and database specialists, UI design). For large scale projects, we recommend carrying out in depth consultations as part of a fact finding mission, before database design and data transfer are carried out.

GeODin is designed, programmed and distributed exclusively by Fugro. Visit www.geodin.com for further information.
