

# FUGRO GEODIN RENTAL OPTIONS

Software when you need it: Renting provides the flexibility of just paying for GeODin software when you need it. Depending upon your workflow this could be on a project by project basis or for a few months at a time. Rental versions have all the latest GeODin features.

## WHEN TO RENT

If your GeODin workflow demands are such that some licences are not always in use, then renting instead of buying may be an interesting alternative to consider.

Renting GeODin for 18 months costs less than purchasing GeODin Essentials or Professional outright, with a GeODin+ software update service contract.

Purchasing twelve months rental instead of three is cheaper and saves between 110-270 €, depending on the GeODin Edition. Rental licences always use the latest GeODin version, including the features available to GeODin+ customers.

## HOW TO RENT

First of all decide which GeODin Edition you wish to rent. An activation fee is required for each licence before the initial three month period starts, after which licences can be rented for either one or three more months as required. The quickest way to rent licences is to buy via our web shop.

During the rental period you can buy your Essentials or Professional licence and Fugro will credit you the activation fee paid at the start of your rental activity. Please note that a GeODin Portal licence can only be rented.

All prices are gross prices.*

**RENTAL CONDITIONS**

All rental fees must be paid in advance. The one-time activation fee is refundable when a customer buys the rented licence. The minimum rental period is three months. After the initial three months customers may either rent for one, three or twelve months periods, or pause their rental activity. Rental periods start once Fugro has received payment and cannot be interrupted or transferred between different licences.

Please note that GeODin Portal licences can only be rented. GeODin Portal renting can optionally include Fugro hosting on managed servers for an additional monthly fee. All prices are gross prices.

**REQUIREMENTS**

The recommended system requirements are PCs with Windows operating system from Windows 10 (64-bit) with 4 GB RAM and a display resolution of 1920 x 1080 px. GeODin may also be run from a Windows Server 2016 or higher as well as Citrix. Previous Windows operating systems and RAM configurations may work, but these are not supported. Please contact your network administrator for further information.

By default GeODin data is stored in a Microsoft Access® database (note that you do not need a Microsoft Access licence). When working with client/server databases the appropriate database drivers must also be installed. GeODin can be used as a stand-alone program or integrated in a multi-user network. Integrated contextual help is provided in English and German.

GeODin is designed, programmed and distributed exclusively by Fugro. Visit [www.geodin.com](http://www.geodin.com) for further information.
