# FUGRO
GEODIN ONLINE TRAINING

Fugro offers online training as a more flexible and cheaper alternative to on-site courses. The range of beginners to expert GeODin topics is the same, but they can be better scheduled to fit client workflows or individual project requirements.

OPTIMISING GEODIN

We offer a series of online sessions covering all aspects of GeODin, from a beginner, through advanced to an expert level. Whatever your objectives are, Fugro can arrange the optimal training course content.

As software, FastViewer® (free of charge) or Microsoft Teams can be used. We also recommend testing audio headsets or computer speakers before training courses start. Courses can be booked for just 1 hour and up to 6 hours. Customers with a software maintenance contract (GeODin+) receive a 15% discount when purchasing training hours.

Course contents can be adjusted to the users experience with GeODin and specific client requirements. A list of training topics for different levels is shown overleaf. Longer courses are spread over several days or weeks and structured into a series of one hour online sessions, comprising ca. 40 minutes presentation and ca. 20 mins. for questions. A demo database is always supplied, though clients may choose to supply their own data. Fugro can provide licences for the duration of the training course so that all users can practise.
